THE CB RHIZOBIUM STRAIN CATALOGUE

R.A. DATE, H.V.A. BUSHBY and R.B. PANITZ

SUMMARY:

This is a catalogue of 656 strains of Rhizobium available from the Division of Tropical Crops and Pastures, CSIRO, Brisbane. The catalogue is in three parts: The first is a list of strains of Rhizobium by accession number and includes information concerning host and country of origin, and growth characteristics on a yeast - mannitol medium. The second is an inverse list by host (genus and species) and includes a listing of strains isolated from each host. The third is a list of recommended strains of Rhizobium for commonly sown legumes.

Division of Tropical Crops and Pastures, CSIRO, Cunningham Laboratory,

THE CB RHIZOBIUM STRAIN CATALOGUE

R. A. DATE, H. V. A. BUSHBY and R. B. PANITZ

CSIRO, Division of Tropical Crops and Pastures, The Cunningham
Laboratory, 306 Carmody Rd., St.Lucia, Queensland 4067, Australia.

The Rhizobium Collection of the Division of Tropical Crops and Pastures began in 1956 when the late Dr.D.O.Norris commenced his studies of rhizobia for tropical legumes. The total germplasm bank now contains more than 3000 isolates of Rhizobium suitable for a wide range of tropical forage and grain legume species. This catalogue lists only those strains (656) that have been evaluated for effectiveness in nitrogen fixation in glasshouse sand-jar (Norris and Date 1976) or soil-pot tests. Information related to effectiveness is published separately (Bushby, Date, Norris and Panitz 1984, Date and Norris 1984). The remaining strains represent indigenous rhizobia (about 850 strains) isolated from nodules of both native and introduced legumes, and introduced rhizobia (about 1500 strains) representing new collections that correspond to new plant germplasm collections introduced via the Division's plant introduction program. A summary of the number of strains isolated from the various host genera is included in Table 1 for both the whole collection and that part of it listed in this catalogue.

All cultures in the collection germplasm bank are maintained freeze-dried in vacuum sealed ampoules stored at room temperature (20-25 deg.C.). The method of preservation is a modification of the procedure described by Vincent(1970), and is similar to that described by Dye(1980). The collection is listed in the World Directory of Collections of Cultures of Microorganisms (World Data Center on Microorganisms 1982) as Collection No.57, and has the Australian Rhizobium Collection identifying acronym CB (CSIRO, Brisbane) (Note - the acronym RSC in the World Directory is incorrect).

The catalogue has been prepared from computerized data records as the CB Rhizobium strain accession list and as a list of the names of the legume plants from which the strains were isolated. General requests for strains should be limited to those in the recommended strain list at the end of this catalogue, however, for specific studies all strains in the catalogue are available gratis to bona fide research organizations.

THE CB ACCESSION LIST

Strains of Rhizobium are listed by their CB accession number with details of host and country of origin. The headings GENUS, SPECIES, COUNTRY and TOWN are self explanatory.

ORIG.NO. indicates the label or number of a strain received from another laboratory (see Table 2), which may or may not be the laboratory of isolation. If listed as NOD then the strain was isolated by CSIRO, Brisbane prior to 1972. Strains isolated since that time have a prefix D, DR, F, RAD, ST or VB.

GROWTH and REACTION refer to the general rate of growth and the culture medium pH when grown in standard yeast-mannitol medium. GROWTH is recorded as either FAST(2-3days), INT'MED(=INTERMEDIATE) (3-5days), SLOW(5-7days), V.SLOW (10-14days) or VARIABLE (? days). REACTION is final pH at the end of growth (Norris 1965). We use the information listed under GROWTH and REACTION as a general guide to a strain's behaviour. Many strains react differently with small changes in medium composition and growth condition (Date and Halliday 1979).

The COMMENT column is used to amplify previous information or report a special characteristic. Abbreviations used are: E = effective, EX = from, I = ineffective, = kilometres and ORIG = origin.

THE HOST LIST

This section of the catalogue is a list of legumes from which the CB Collection of rhizobia has been isolated. The strains isolated from each host are listed by CB number after each host plant name.

RECOMMENDED STRAINS

A list of strains recommended for the inoculation of most of the commonly sown legumes is provided in this section. Strains are listed by CB number only after each host or host group. These strains are available as freeze-dried culture in vacuum sealed ampoules, agar culture and in special circumstances as peat culture. The strains marked with an asterisk (*) are available in commercially produced (in Australia) peat inoculants. They may not necessarily form effective associations with all lines, varieties and accessions of the species indicated in the list.

ACKNOWLEDGEMENTS

The information relating to origin and effectiveness of strains of Rhizobium in the CB Collection is maintained in two data bases on the Division's ONYX 8000 series micro computer. We acknowledge the assistance

of Mr. B.D.Thomas of the Plant Introduction staff for assistance in establishing the computerized data bases and the printing of this catalogue. We also acknowledge the help of Mr.R.W.Williams in transferring the culture collection information from card index to computer file.

RHIZOBIUM STRAIN RECOMMENDATIONS

The following strains of Rhizobium are those currently recommended by the Legume Bacteriology Section for all experimental and commercial legume sowings.

These strains are available as ampoules of liophilized broth culture, agar culture and in special circumstances as peat cultures. The strains marked with an asterisk (*) are available in commercially produced inoculant peat cultures.

When requesting strains and when referring to them in any published material please use the correct identification, i.e. the label of the laboratory in which the strain was isolated.

Tropical legumes:

General cowpea group

Arachis spp.)
Cajanus cajan (pigeon pea))
Calopogonium spp.)
Crotalaria spp.)
Indigofera spp.)
Lespedeza spp.)
Macroptilium atropurpureum (cv Siratro)) CB756 *
Neonotonia wightii (all cultivars))
Peuraria spp.)
Stylosanthes spp. (see below))
Teramnus spp.)
Vigna spp. (except mungbean, see below))

Other species

Aeschynomene falcata	CB2312
Cassia spp.	CB1483
Centrosema pubescens	CB1923 * (=C101a Brazil)
Cicer arietinum (Chick pea)	CB2855 * (=CC1192)
Cyamopsis tetragonolobus (Guar)	CB3035 (=QAl083)
Desmodium spp.	CB627 *
Desmodium heterophyllum	CB2085
Glycine max (all cultivars except Hardee-CC709)	CB1809 * (=USDA136)
Lablab purpureus	CB1024 *
Leucaena leucocephala	CB81 *
Lotononis angolensis	CB1323
Lotononis bainesii	CB376 *

<i>Lotus corniculatus</i>	CB2938 * (=SU343)
<i>Lotus pedunculatus</i>	CB2270 * (=CC829)
<i>Lupinus</i> spp.(including <i>Serradella</i> - <i>Ornithopus</i> spp.)	CB2026 * (=WU425)
<i>Macroptilium martii</i>	CB1717
<i>Macrotyloma</i> spp.	CB1024 *
<i>Stylosanthes capitata</i>	CB2898
<i>Stylosanthes guianensis</i> (fine stem types)	CB82 * or CB1650
<i>Stylosanthes guianensis</i> (Cultivars Cook, Endeavour, Graham, Schofield)	CB756 *
<i>Stylosanthes hamata</i> (alkaline soil types)	CB2126
<i>Stylosanthes hamata</i> (Verano and Verano types)	CB756 * or CB1650
<i>Stylosanthes humilis</i> (all Cultivars)	CB756
<i>Stylosanthes scabra</i> (Cultivars Fitzroy and Seca)	CB756
<i>Stylosanthes</i> spp.	CB756 *
<i>Stylosanthes</i> spp.(untested lines)	CB756 * or CB82 * (or CB328 or CB2229)
<i>Vigna mungo</i> , <i>V.radiata</i> (Mungbeans)	CB1015 *

Temperate legumes:

Clovers

<i>Trifolium fragiferum</i> , <i>T.pratense</i> , <i>T.repens</i>	CB1990 * (=TA1)
<i>Trifolium cherleri</i> , <i>T.hirtum</i> , <i>T.incarnatum</i> , <i>T.subterraneum</i>	CB2937 * (=WU95)
<i>Trifolium semipilosum</i>	CB782 *

Medics

<i>Medicago</i> spp. (all medics and <i>Melilotus</i>)	CB3061 * (=CC169)
--	-------------------

Other species

<i>Coronilla varia</i> (Crown vetch)	CB2012 (=CC401)
<i>Onobrychis sativa</i> (Sainfoin)	CB2000 (=NITRAGIN116A5)
<i>Phaseolus vulgaris</i>	CB2899 * (=CC511)
<i>Pisum sativum</i> , <i>Vicia faba</i> , <i>V.sativa</i>	CB1447 * (=SU391)
